Caratteristiche · Characteristics

Le pompe VL sono del tipo volumetrico a lobi. Ciò significa che la portata varia in modo proporzionale con la velocità di rotazione. Sono autoadescanti e la forma costruttiva consente il passaggio di corpi solidi con dimensione massima 15 mm.

The VL pumps are of the positive displacement, rotary lobes type. This means that the flow varies proportionally to the rotation speed. They are selfpriming and the particular construction allows the transfer of foreign bodies up to 15 mm dimension.

Materiali · Construction

1. il corpo è in ghisa stabilizzata.
2. le spalle in acciaio antiusura.
3. i lobi sono in NBR-EPDM-VITON.
4. le tenute sono radiali, a labbro, su bussole intercambiabili, temprate e rettificate.

1. *the housing is built of cast iron.*
2. *the protecting shoulders are of wear-resistant steel.*
3. *the lobes are coated with NBR-EPDM-VITON rubber.*
4. *the seals are of radial lip type, mounted on interchangeable bushings, which are hardened and ground.*

Impieghi · Application

Per ogni tipo di attività dove il prodotto sia viscoso, pastoso, contenente parti solide. Idonea per oli, vernici, paste, fanghi, acque cariche.

For all activities where the media is viscous, pasty and with solid contents. The pump is suitable for handling oil, paint, pastes, mud, storm water, sludges.

Accesso frontale ai lobi · Lobe maintenance

Per rendere più pratico e veloce il controllo e la sostituzione dei lobi l'accesso alla camera di pompaggio avviene frontalmente senza interessare tenute e trasmissioni.

For a practical and quick maintenance the lobes can be checked and replaced directly from the front of the pump by removing the front flange without interfering with the seals or the transmission.

Sistema rilevamento perdite · Leak checking system

Un canale di drenaggio consente di rilevare immediatamente il buon funzionamento delle tenute.

A draining port allows to check constantly the correct operating of the seals.
